

BlueJ

Lets get started.

Produced by: Ms. Mairead Meagher,
Ms. Siobhán Roche.

What is BlueJ?

BlueJ is a free, beginner-friendly integrated development environment (IDE) for the Java programming language, designed to teach object-oriented programming concepts.

Why are we using BlueJ?

- Simple, non-intimidating interface
- Interactive object creation
- Powerful visualisation of class structure and objects
- Makes complex Object-Oriented Programming (OOP) concepts easier for beginners to grasp and experiment with.

What is Programming?

Programming **IS** problem solving.

What is Object Oriented Programming (OOP)?

- Object-oriented programming is based on the concept of objects.
- In object-oriented programming data structures, or objects are defined, each with its own properties or attributes.
- Each object can also contain its own procedures or methods

What is Java?

- Java is a multiplatform, object-oriented programming language that runs on billions of devices worldwide.
- It powers applications, smartphone operating systems, enterprise software, and many well-known programs.
- Despite having been invented over 20 years ago, Java is currently the most popular programming language for app developers.

Flow of Control in a Program

- Each program you write will typically have:

Sequence	Things that will be done in a particular order
Selection	Things that will be done conditionally
Iteration	Things that will be done repetitively

Launch BlueJ

Project Window

Toolbar

Class Diagram
Area

Hello World

BlueJ

New Java Project

- Click on Project -> New Project
- Give your project a name and location, press OK
- Click on New Class, and name it

main method

- Double-Click on the HelloWorld class, and add the following code

Main method

A screenshot of a Java IDE window titled 'HelloWorld - HelloWorld'. The window has a menu bar with 'Class', 'Edit', 'Tools', and 'Options'. Below the menu bar is a tab labeled 'HelloWorld' with a close button. A toolbar contains buttons for 'Compile', 'Undo', 'Cut', 'Copy', 'Paste', 'Find...', and 'Close', along with a 'Source Code' dropdown menu. The code editor shows the following code:

```
1  
2 /**  
3  * Write a description of class HelloWorld here.  
4  *  
5  * @author (your name)  
6  * @version (a version number or a date)  
7  */  
8 public class HelloWorld  
9 {  
10     public static void main(String[] args){  
11         System.out.println("Hello World");  
12     }  
13 }
```

The code is color-coded: comments are in blue, keywords like 'public', 'class', 'static', 'void', and 'String' are in red, and identifiers like 'main', 'args', and 'System.out' are in black. The main method block (lines 10-12) is highlighted with a yellow background.

Compile

Run your Code

- Right-Click on your class, and choose your main method

Run your Code

- Click OK

Output

- You should see the following in your code window

Questions?
